11	The 90-day ramp

The full playbook for building organic reach, a real community, and a scalable lead engine for Crypto Gameplan on LinkedIn. Hand-off ready for the Crypto Gameplan marketing person.

This is not "post 5 times a week." It's a **three-engine growth system** where content, targeted outbound (Sales Navigator), and community engagement compound into one funnel that ends in qualified DMs the CGP AI screens and books.

0. The strategic bet (why this works)

LinkedIn is where Crypto Gameplan's buyer actually is — and almost no serious crypto operator is there. The ICP is experienced, non-finance professionals (tech, consulting, medical, legal, founders) with \$100k–\$300k+ in crypto. These people are on LinkedIn for their careers, not on crypto Twitter chasing memes. Crypto marketing is saturated on X / IG / YouTube and wide open on LinkedIn.

So the play is an **arbitrage**: own the niche "systematic crypto investing for serious professionals" on LinkedIn before anyone else does. Calm, specialist, anti-hype — which is exactly the register this audience trusts and the opposite of what they're sick of.

The three engines (they feed each other)

- **Content engine** (reach → authority): makes outbound **warm** — the prospect has seen Crypto Gameplan's posts before the DM lands.
- **Outbound engine** (Sales Navigator → warm DMs): predictable, scalable lead flow.
- **Community engine** (comments → relationships): grows the network that boosts content reach (your network is your distribution).
- The **AI removes the DM bottleneck** — the one thing a human can't do at scale. That's what makes the whole thing scalable.

The one number that matters: qualified "system" DMs / week → booked calls. Impressions and followers are means, not the goal.

Reality check (read this before anything else)

Most LinkedIn plans fail for one reason: people stop after three weeks because the early numbers look small. They will. Reach compounds **after** the network and the algorithm trust are built, not in week one. The non-negotiables that make this work:

- **Consistency beats brilliance.** 4 posts every week for 6 months beats 7 posts for 3 weeks then nothing. If daily isn't sustainable, the floor is **4x/week, never zero.**
- **The first ~1,000 right-fit connections are the foundation** — reach is capped by network size (\$5b). Building the network IS the growth work, not a side task.
- **The daily engagement routine (\$6) is half the system**, not optional. Posting without engaging is shouting into an empty room.

This plan works. But it works on a 90-day horizon with disciplined execution, not on hope.

1. How LinkedIn reach actually works (the mechanics, no myths)

You can't win a game you don't understand. LinkedIn distribution in one model:

Reach $\approx$ early velocity (first 60–90 min) $\times$ dwell time $\times$ comment depth $\times$ audience fit

What that means in practice:

1. **The first 90 minutes decide everything.** LinkedIn shows a post to a small slice of your network first. If they engage fast, it expands the reach; if not, it dies. → Post when the ICP is online, and get early engagement (see the engagement routine, §6).
2. **Dwell time > likes.** The algorithm measures how long people *stop* on a post. A strong hook that makes them click "see more" and read = a reach signal. → Long-form text with a gripping first 2 lines beats a one-liner.
3. **Comments are the top currency.** Comments (especially multi-word ones) outweigh likes and reposts by far. → Design posts to *provoke* comments (a question, a hot take, "agree?"). Reply to every comment in the first hour — each reply is another engagement signal.
4. **Post from the personal profile, not the company page.** Personal profiles get vastly more organic reach. CGP's company page is a credibility asset, not a reach engine. The founder posts; the page reposts.
5. **Native only. No links in the post body.** LinkedIn suppresses posts that send people off platform. Put any link (walkthrough, booking) in the **first comment**, and say "link in the comments."
6. **One post per day, consistently.** Two posts in a day split your own reach. Daily-ish consistency trains the algorithm that you're a creator worth distributing.
7. **Format reach order (rough):** document carousels and native video and strong text+image tend to outperform plain links and reposts. Rotate formats; don't do the same thing daily.

These aren't opinions to argue with — they're the constraints the content system is built around.

2. The profile = the conversion page (lock this in week 0)

Every reach activity sends people to the profile. If the profile doesn't convert, reach is wasted. Before posting anything:

- **Headline:** specialist + audience + mechanism. *"Systematic crypto investing for experienced investors | Process over opinion | Founder, CryptoGameplan"*
- **Banner:** one line of positioning ("We follow where capital flows. We don't predict."), clean, CGP mark.
- **Featured (pinned):** (1) the free walkthrough, (2) a 60–90s "how the system thinks" clip, (3) the booking link.
- **About:** the first 2 lines are all that show before "see more" — open with the worldview, not a CV. Worldview → short story → who it's for → CTA: *"DM me 'system' for the free walkthrough."*
- **The keyword "system" is the spine.** It's everywhere (headline rarely, About, posts, banner), because that exact word is the trigger the AI listens for (a DM with "system" = instant warm lead into the funnel).

3. The content system — a daily "show"

Crypto Gameplan already posts professional content daily on Instagram. We **don't create from scratch — we translate and atomize** (the engine in §4). The goal is a *daily* LinkedIn presence built as named, recurring formats, because recurring formats build anticipation and a sense of a "show" people follow — that's what builds a community, not random posts.

The five content pillars

#	Pillar	Job	Feels like
1	The System	Teach the systematic worldview + the 5-question cascade (structure only)	"He thinks more clearly than I do"
2	Hard Truths	Contrarian POV that hits burned investors	"Ouch, that's me"
3	The Numbers	Weekly market-structure data/facts the community cares about (no predictions)	"This is the signal in the noise"
4	Founder Story	The founder's journey: 2017, the 2022 loss, the shift to systematic	"He's been where I am"
5	Proof & Process	Member mindset shifts + the program, qualitatively	"Real people, real structure"

The weekly cadence (named recurring formats)

Day	Format (brandable name)	Pillar	Type
Mon	"Hard Truth Monday"	Hard Truths	Short punchy text
Tue	"The Tape" — the weekly numbers post	The Numbers	Data carousel / text
Wed	"System Breakdown"	The System	Carousel / explainer
Thu	"How I Actually Think"	Founder Story	Story post / native video
Fri	"From the Inside"	Proof & Process	Soft post + CTA
Sat	light: best clip of the week / a poll	rotating	Native video / poll
Sun	reflective mindset post (the human brand)	Founder Story	Short text

- **"The Tape" (the numbers post):** once a week, a factual market-structure read the community cares about — e.g. stablecoin supply, ETF flows, liquidity conditions, BTC dominance, market breadth — framed through the systematic lens. **Facts and structure only, never a prediction or a buy/sell call** (see §9). This is the post that makes serious people follow, because it's signal in a sea of noise. Format: a clean carousel of 3–5 numbers + one structural line each.

- **CTA rhythm:** a hard CTA ("DM me 'system'") ~1–2×/week (Fri + sometimes the story post). A soft comment-CTA ("comment 'system' and I'll send the walkthrough") more often — every commenter is a warm lead the AI can pick up (Trigger C). The other 4–5 posts are pure value. Selling every post kills the prestige.

Hook formulas (the first line is 80% of the post)

- **Contrarian:** "Diversification is the most misunderstood word in crypto."
- **Confession:** "In 2022 I lost more in three months than most people invest. Here's what it taught me."
- **Callout:** "If your exit plan is 'I'll know when', you don't have one."
- **Pattern interrupt:** "Most crypto advice exists to make you feel smart. None of it tells you what to do on a red Tuesday."
- **Numbered promise:** "Five questions decide whether I deploy capital. Here's the first."
- **Story open:** "A guy handed me a coffee in a park in 2017 and changed my next decade."

Rules: one idea per post, short lines, lots of white space, never open with "Excited to share", always end with a question or soft CTA so the comments fill (comments = reach).

4. The repurposing engine (how Crypto Gameplan posts daily without burning out)

This is the answer to "how can he post every day": **he already produces the raw material**. The marketing person's job is translation + atomization, not creation.

Translate IG → LinkedIn (don't copy-paste):

- IG is visual, fast, casual. LinkedIn is text-first, slower, value-dense, professional.
- Take the *idea* from an IG story/post → expand it into a LinkedIn text post with more depth and a professional frame. Same insight, different packaging.
- IG Reel / short → upload **natively** to LinkedIn (captioned, vertical or square) with a strong text hook above it. Never just a link to IG/YouTube.

Atomize 1 long asset → a week of posts:

Source (1 YouTube update or a week of IG stories)	LinkedIn outputs
The core idea	1 text breakdown (Mon/Wed)
The key points	1 document carousel (System Breakdown)
Best 30–90s moments	1–2 native clips (captioned)
A sharp line	1 quote post
Any data shown	1 "The Tape" numbers post

So **one source asset = 5–7 LinkedIn pieces**. A week of content from one batching session. (LinkedIn only — we are not running TikTok.)

The marketing person's weekly batching workflow:

1. **Mon (1–2 h):** pick the week's source asset(s). Cut clips, write all 5–6 posts, build the carousel. Schedule everything.
 2. **Daily (15–20 min):** the engagement routine (§6) — non-negotiable, this is where reach is won.
 3. **Fri (15 min):** check the KPIs (§8), note the best performer, plan next week's source.
- Keep a simple content log (one sheet): date · format · pillar · hook · CTA · link · result.
-

5. Sales Navigator — the targeting + outbound engine (where scale comes from)

Content brings inbound. Sales Navigator + the AI bring **predictable, scalable outbound**. This is the second engine, and it's where "maximum leads" really lives.

Build the ICP target lists (mirror icp.md):

- Filters: **seniority** = senior / manager / director / owner; **industries** = tech/software, consulting, medical, legal, engineering, non-crypto founders (i.e. *non-finance professionals with capital*); **geography** = English-speaking markets; **exclude** finance/banking, "trader" titles, and obvious crypto-natives.
- Save these as Lead Lists / saved searches. These become the AI's cold-outreach list (Trigger A).

The warm-outbound sequence (NOT spray-and-pray — this protects the account and converts):

1. **Warm them first.** Before any DM: view their profile, follow, and ideally engage with one of their posts. Now the CGP profile isn't a stranger.
2. **They also see Crypto Gameplan's content** (profile view → they check the feed → the posts do the selling passively). This is the content × outbound flywheel.
3. **Then the connect / opener** → the AI takes the conversation from here (the cold opener, then the 4-question screen).

Two warm lists the AI should prioritize over pure cold:

- **Post engagers** — anyone who comments on / reacts to Crypto Gameplan's content (Trigger C). Warmest inbound-ish leads.
- **Profile viewers** — Sales Nav shows who viewed the CGP profile. Intent signal → the AI reaches out.

Scale + safety: Sales Nav supplies the *volume* of targeted leads; the AI supplies the *conversation capacity* humans don't have; LinkedIn's daily action limits cap the throughput. So we **ramp volume slowly** as the account warms (per the founder's steer: start low, scale what's safe). The AI's send limits + randomization are the guardrail — never blast.

5b. Cold start + network growth (the reach foundation)

Reach is capped by who's in Crypto Gameplan's network. With a small or generic network, even great posts reach almost no one. So before reach can compound, we build the right network. This is the most important early-stage work and the part most plans skip.

Solving the cold start (weeks 1–4):

1. **Engagement-first, not posting-first.** Spend the first 2 weeks commenting (thoughtfully) on 10–20 posts/day from creators the ICP already follows. People discover Crypto Gameplan through his comments before his posts — this seeds the first audience.

2. **Seed the first-hour engagement.** Line up a small group (Jacques, the team, a few allies) to like + comment in the **first 15 minutes** of each post. Early velocity is what triggers the algorithm to expand reach. This is white-hat and standard practice.
3. **Port the existing audience.** Crypto Gameplan already has an audience on Instagram / YouTube. Tell them about the new LinkedIn presence (story, bio link, a pinned post) so warm followers seed the base.
4. **Optimize for the "see more" + comment** on every post from day one (dwell + comments are the only signals that matter when the network is small).

Network growth as an ongoing reach lever:

- Send **targeted connection requests daily** to the Sales Nav ICP (start ~15–20/day, ramp as the account warms — never blast, account safety = revenue continuity). Light personal note, no pitch.
- Every accepted connection is one more person who sees every future post. The first ~1,000 right-fit connections turn a dead feed into a compounding one.
- Accept + engage with right-fit inbound connection requests (the content will start generating these).
- This network-building is also the **outbound list** (§5) and the **warm audience** (§6) — same action, three payoffs.

Practical sequencing: weeks 1–2 are mostly engagement + connections + profile (low posting), weeks 3–4 ramp the content rhythm onto a network that can now actually see it.

6. The community + engagement engine (organic feel, real reach)

Reach is earned in the comments as much as in the posts. 15–20 min/day, right after posting:

- **Reply to every comment on Crypto Gameplan's posts** in the first hour (each reply is a reach signal and starts a relationship).
- **Comment thoughtfully on 5–10 posts** from adjacent voices the ICP follows (serious analysts, finance-adjacent creators, fintech founders). Add a real point — never "great post". This borrows their audience and builds Crypto Gameplan's name in the right rooms.
- **Engage with the Sales Nav target list's content** (warming, §5).
- **Make it a two-way thing:** run polls, ask "what's your take?", feature good community answers in a follow-up post ("a few of you said X — here's how I'd frame it"). People follow creators who make them feel part of something. That's the community, and it's also reach.

This engagement routine is what turns followers into a community and a cold network into a warm one. It is not optional — it's half the system.

7. The funnel: every reach activity routes into the AI

Nothing is "just content." Every top-of-funnel action has a path into the screening AI:

Source	AI trigger	Path
Post says "DM me 'system'"	Trigger B	warm DM → walkthrough → 4-question screen

Someone comments / engages	Trigger C	AI DMs them, references the post
Sales Nav cold list	Trigger A	AI cold opener → screen
Lead-magnet quiz completion	Trigger D	AI bridges to the screen

All four converge on: **screen** → **qualified** → **book the call** (the AI handles it; unqualified get answers stored + a graceful exit, no call). Content + outbound are the fuel; the AI is the engine that turns volume into booked calls without a human in every DM.

8. Metrics & the optimization loop (review weekly, 20 min)

Layer	Metric	Why
Lagging (the goal)	qualified "system" DMs / week → booked calls	The bottom line
Content	impressions, dwell, comment rate per post	Is the hook + format working
Profile	profile views / week	Are posts sending the right people
Network	right-fit follower growth	Compounding distribution
Outbound	Sales Nav reply rate, accept rate	Is the targeting + opener landing

The loop: each week, double down on the pillar + format combos that produce DMs and profile views; cut what only earns vanity likes. Feed the winners back into the batching session. The system gets sharper every week.

9. Compliance — the hard guardrails (share with the marketer, no exceptions)

The founder is **not a licensed financial advisor**, and public content carries more liability than private DMs. Never:

- Quote performance, returns, % gains, or member counts ("up 30%", "beat BTC", "X members").
- Predict price or direction ("BTC will hit \$X", "alts are about to run", "sell now"). CGP's entire premise is we follow flow, we don't predict — predictions break the brand AND the compliance line. (Especially watch this on "The Tape" numbers post: report the **fact**, not a **call**.)
- Frame anything as personal financial advice ("you should buy X"). Use "the system reads...", "a systematic investor would frame this as...".
- Promise outcomes ("guaranteed", "risk-free", "consistent returns", "life-changing").
- Use crypto-bro language (ape, diamond hands, HODL, to the moon, WAGMI) — wrong audience, wrong register.

Voice: calm specialist, prestige over loudness. If a post sounds like an influencer trying to pump, rewrite it. When in doubt on a market take, describe the **framework**, not a **call**.

10. Three example posts (the standard to match)

Hard Truth Monday (text)

A thesis is a guess you've fallen in love with.

"ETH flips BTC this cycle." "Alts are about to run." "This narrative is the one."

The problem isn't being wrong. Sometimes you're right. The problem is the market has no obligation to agree with you, and when it stops, you're stuck: hold through a drawdown you can't stomach, or sell at the worst possible moment.

A system doesn't care what you think. It checks what's actually happening and positions accordingly. No ego in the trade. That switch, from opinion to process, is the whole game.

What's a thesis you held too long? 📌

How I Actually Think (story / video script)

In 2017 a guy I'd met on day one of university handed me a coffee and started talking about Bitcoin in a park. Eight years and four cycles later, I run a systematic crypto program with that same guy.

But the part that matters happened in 2022. I'd moved into bigger, longer-term positions, and within three months gave back a devastating amount. Not because I was lazy. Because I was running on conviction instead of a process.

That loss is why CGP exists. I stopped chasing an edge in information and built an edge in process instead. Systems make the decision before the trade shows up, so emotions never get a vote.

If you've been in long enough to know what a 60% drawdown feels like, you already know why this matters.

The Tape — weekly numbers (carousel outline)

Slide 1: "Three numbers that matter more than any price prediction this week. 📌" Slide 2: "[Stablecoin supply / liquidity] — what it is + why it's the first thing the system checks (structurally, not a call)." Slide 3: "[Market breadth / dominance] — direction before selection." Slide 4: "[ETF / flow metric] — where capital is actually moving." Slide 5: "None of this is a prediction. It's the structure a systematic investor reads before touching a position. Want the full walkthrough? Comment 'system'."

11. The 90-day ramp (phased — don't do everything day one)

Phase 1 — Foundation (weeks 1–4): profile overhaul (§2), set up the recurring formats, start the daily content rhythm from the repurposing engine, build the daily engagement habit. Soft comment-CTAs only. Goal: establish "Crypto Gameplan = the systematic one" + warm up the account.

Phase 2 — Outbound on (weeks 5–8): build the Sales Nav lists, start warm outreach feeding the AI (Trigger A) at low, safe volume. Layer in the first hard CTAs. Goal: add a predictable second lead source on top of inbound.

Phase 3 — Scale + optimize (weeks 9–12): double down on the winning content formats, grow outbound volume as the account proves safe, lean into the warm lists (engagers + profile viewers). Goal: a compounding engine producing a steady, growing flow of qualified calls.

After 90 days: keep the rhythm, feed the repurposing engine weekly, let Sales Nav + the AI run the outbound, and review the loop (§8) every week. Reach compounds; the AI scales the conversations; the calls fill the calendar.
